

BARCODE MODULE... A SIMPLE SEAMLESS SOLUTION...

Barcode printing is one of the most important aspects of inventory control and our professionals can assist in the decision-making process. From thermal and dot matrix barcode printers, to sophisticated 2D barcode scanners and 2D data collectors, we offer expert guidance so you can make an educated decision and understand what options are available.

Smart Solution

When it comes to producing barcodes, the SIMMS Barcode and SIMMS 2D Barcode Modules are the smart solution, increasing efficiency while lowering costs. We also offer complete hardware packages and customized solutions. We understand that every industry has unique demands and SIMMS offers the most sophisticated barcode and label-making module in the industry. Whether it is barcode labels to be printed for one specific serialized item, or for

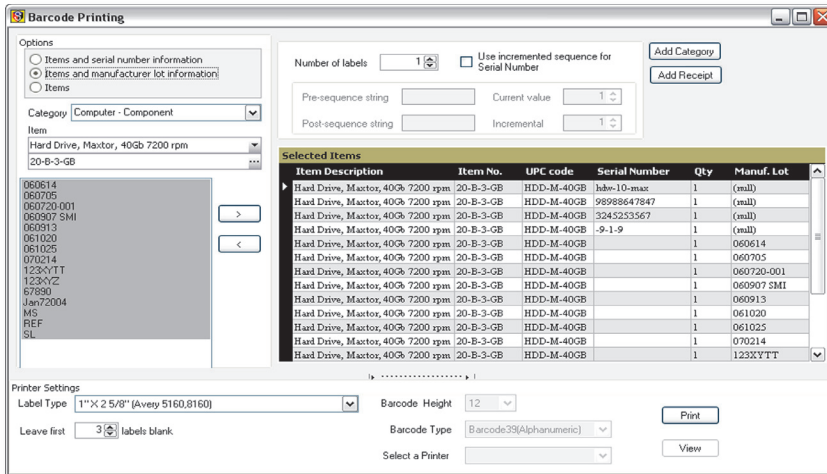

entire categories, SIMMS is compatible with laser printers, specialized dot matrix printers and thermal barcode printers.

WHAT SIMMS CAN DO FOR YOUR BUSINESS

- Improve productivity
- Barcode your warehouse
- Reduce the risk of operator error
- Simplify purchasing/order taking and physical count processes by utilizing barcode technology

Simple logical barcoding

BARCODE MODULE FEATURES

- Print serialized barcodes from our easy-to-use barcode interface, including items' manufacturer's lot numbers.
- Easily print apparel item barcodes for every item on a receipt of goods on-the-fly and generate apparel item tags.
- Print barcodes for all items from a receipt of goods and/or print barcodes for an entire category of items.
- Several barcode formats are supported, and labels can be exported to an external Crystal Report for easy adjustments and/or layout changes. 2D barcoding is supported, providing the ability to select what information should be included in the 2D barcode, e.g. item number, item description, UPC, quantity and manufacturer's lot. The 2D barcode escape code parameters can be set using the Advanced Barcode Printer Setup.
- Print location barcode labels, either one location at a time or add all locations in your system. Location labels enable the scanning of location codes during transactions. A hand-held data collector can make inventory management much easier by eliminating the possibility of user error.
- With barcoding as part of your solution, you have the freedom to utilize scanners in order to reduce data entry errors. Remote data collectors with the SIMMS Windows Mobile program can also be used in order to un-chain yourself from your desk so you can inventory your warehouse then synch with SIMMS.

WHY SIMMS?

World-class support is one of the principal reasons that KCSI is a leader in the Inventory Management arena.

Barcoding made easy

With easy-to-use barcode generation windows and the ability to customize your labels using Crystal Reports, you can easily create and print professional-looking barcodes

Reduce Clerical Error

Just scan a barcode, indicate a quantity and unit of measure and insert. Now you are sure the item entered is the item sold or shipped. The barcode has the item information so you do not have to know it.

Market Leadership

With over a decade of serving various organizations in almost all industries it is no wonder that no other solution even comes close to SIMMS Inventory Management Software.
