

A WIRELESS-BASED INVENTORY SOFTWARE SOLUTION

SIMMS Windows Mobile Module is compatible with almost any Windows Mobile 5 or Mobile 6 device and offers a wireless-based inventory software solution. A powerful barcode solution, beginning with the implementation of the SIMMS Windows Mobile Module, streamlines your entire business process.

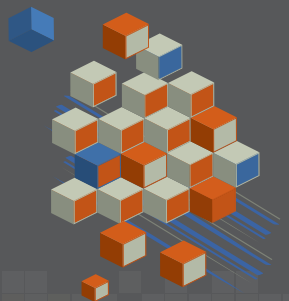

KCSI offers its customers kitted total solutions by combining software with the appropriate hardware for your application. With the SIMMS Windows Mobile Software Solution you can automate the essential functions of your organization to maximize your staff's time.

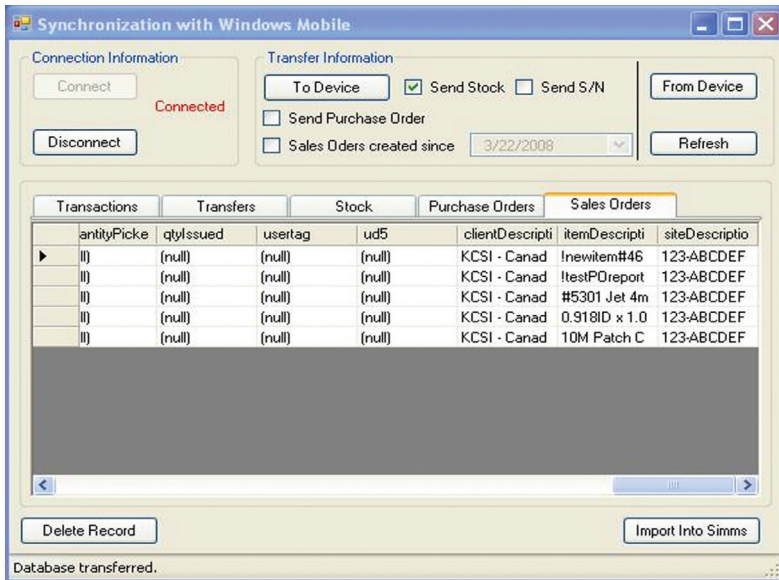

Take stockroom inventory, complete physical count adjustments, receive purchase orders and issue sales orders all remotely and effortlessly.

WHAT SIMMS CAN DO FOR YOUR BUSINESS

- Collects data instantaneously
- Improves productivity
- Reduces errors
- Frees you from your desk
- Connects quickly with customer and vendor data remotely
- Tracks your fixed assets
- Simplifies stock taking tasks

No longer be chained to your desk

WHY SIMMS?

World-class support is one of the principal reasons that KCSI is a leader in the Inventory Management arena.

Remote Data Collecting made easy

With easy-to-use SIMMS Windows Mobile Solution you have an easy way of completing tasks much faster right where the job needs to be performed remotely un-chained from your desk, instead of to grabbing the information and then going back to your desk countless times until the task is completed.

Reduce Clerical Error

Just scan a barcode, indicate a quantity and unit of measure and insert. Now you are sure the item entered is the item utilized. The barcode has the item information so you do not have to know it.

Market Leadership

With over a decade of serving various organizations in almost all industries it is no wonder that no other solution even comes close to SIMMS Inventory Management Software.

THE SOLUTION IS SIMPLE

The SIMMS Windows Mobile Program is an optional module designed to work seamlessly with the already powerful SIMMS Inventory Management software. This module is a remote data collecting software solution that addresses the need to connect quickly with customer and vendor data, track your stockroom inventory, complete physical count adjustments, receive and issue items all remotely and effortlessly without hurting your pocketbook.

SIMMS software's Windows Mobile Program works on Windows Mobile-based devices (smart phones or data collectors). It helps you save time and eliminate human error in tallying product totals, while completing transactions remotely free from the boundaries of your computer. You gain the flexibility of walking through your warehouse and processing inventory physical counts on-the-fly by transmitting the data directly into SIMMS Inventory Management Software (either in batch mode uploads or live via wireless LAN/WAN).

With the SIMMS Windows Mobile Program on your windows mobile device you can easily complete your invoices, receipts of goods, inventory transfers, physical count adjustments, you can even create items on-the-fly when using the device in live wireless mode.

Employees simply scan codes on the orders and all of the information is passed to SIMMS Software right away (if wireless live mode is enabled). If batch mode is your preference, all data on the Windows Mobile device is synchronized with the SIMMS system in just minutes.

There is no need to process inventory, receipts of goods, item transfers and invoices when chained to your desk. You are now free to roam your office, warehouse or branches completing these tasks easily and

remotely. With the SIMMS Windows Mobile Program, you have the flexibility to choose your hardware and your budget.
